

StarTan™ Tinted DHA Solution is a superior tanning product developed using the latest technology designed to promote an initial color and a subsequent highly natural looking sunless tan.

StarTan™ Tinted DHA Solution contains a blend of Dihydroxyacetone and Erythrulose in an optimized ratio to maximize the synergistic activity of DHA and Erythrulose. The active materials are incorporated into a base designed to provide a good dry time with reduced drying of the skin.

StarTan™ Tinted DHA Solution includes Aloe Vera Gel together with Moisturizing ingredients (read below) to assist in preventing dry skin due to the drying effects of DHA. Also included is White/Green Tea Complex which is a highly effective Anti-Oxidant.

StarTan™ Tinted DHA Solution is formulated with the finest ingredients available to give you a StarTan Sunless Tan and make your skin feel good.

Aloe Barbadensis Gel

Referred to as the “Lily of the Desert,” the Aloe plant grows in arid desert areas throughout the year. Its thick green leaves envelope the transparent Aloe Vera Gel. This plant has the unique ability to retain water, enabling it to survive in dry climates. Aloe contains health-promoting components, such as vitamins, minerals, enzymes and essential Amino Acids, and protects the skin from dryness.

Comfrey Extract

Extract from comfrey is used in cell therapy treatments, face creams and sun care preparations as a healing agent and moisturizer. An anti-inflammatory and an irritant, it is reported to promote skin cell regeneration.

Erythrulose

Erythrulose is a natural sugar which when incorporated with DHA prolongs and produces a natural tan. Well documented Clinical Studies illustrate the tan extension, color improvement and the activity in reducing skin dry out. Blind studies have shown the optimum ratio of DHA and Erythrulose to achieve the maximum benefits.

Panthenol

(Vitamin B-5) An excellent natural skin hydrator.

Wheat Amino Acids

Extracted from the embryo of the wheat kernel. An anti-inflammatory and skin nourisher that also acts as a natural preservative because of its high vitamin E content.

White/Green Tea Leaf Extract

The benefits of green tea to the skin have been widely documented. This powerful antioxidant (20 times stronger than vitamin E) inhibits the formation of cancer-causing free radicals and helps prevent skin cell damage caused by sun exposure and pollution. An important ingredient in sun care products, as well as in creams, lotions, shampoos and conditioners. An anti-inflammatory and ant irritant, it is high in xanthines, very soothing and moisturizing to both hair and skin. We use powdered Matcha green tea from Japan, it is the finest.
